

LAZY DAZE

30' Island Bed

26 $\frac{1}{2}$ ' Mid-Bath

Why should you purchase a motorhome direct from the factory?...

LAZY DAZE 16' CLASS "C"-1966
Available to see in our showroom.

There is no substitute for experience. Lazy Daze has been designing, manufacturing and selling RV's since 1956. In 1966, we designed, built and offered for sale the first minihome in America.

By selling directly from the factory and eliminating dealer mark-ups, Lazy Daze is able to offer a motorhome that is absolutely top quality at a competitive price. It is loaded with standard features and equipment, all included in the base price. Besides the price/quality rewards to the buyer, there are many other "spin-off" advantages from factory direct sales. For example when we sell direct at the factory, a closer person to person relationship is created. Customers quite often critique our product and offer suggestions and changes which help contribute to an even better product. Our motorhome today has become a superior product, created through years of implementing suggestions and ideas from many sources.

What should the buyer of a new motorhome be looking for? . . .

EYE APPEAL

Let there be no doubt, the Lazy Daze will attract that admiring second glance from everyone. Considerable effort has been put forth to design a motorhome with "classic clean lines", no faddish designs that will eventually become dated. The new Lazy Daze exterior profile and graphics emphasizes a sleek, smooth, streamline look of the future, without sacrificing its identity to the past. This, coupled with the quality of workmanship in our motorhome, creates that good feeling called, "Pride of Ownership".

26 1/2' Island Bed

QUALITY OF WORKMANSHIP AND MATERIALS

Our primary objective, when we first set up our production line, was to build the very best RV ... not the most. To utilize the very best components available ... not the cheapest. To bring all of the components together to create a Lazy Daze Motorhome with outstanding quality.

We would like you to visit our factory. We will personally show you our motorhomes under construction. At this time you may take note of the quality of materials and workmanship that go into a Lazy Daze, both inside and outside. Observe the gusseted "rings of steel" that surround the coach to provide extraordinary protection for the occupants.

26 1/2' Rear Bath

QUALITY OF WORKMANSHIP AND MATERIALS (continued)

For greater longevity, simpler repair capability and outstanding appearance, Lazy Daze exterior coach walls are covered with smooth sectional aircraft aluminum panels. These panels can be replaced at a later date, if damaged. This material is lighter and non-flammable, as compared with fiberglass. Our motorhomes are then custom painted in our specially constructed spray booth, with aircraft polyurethane enamel, providing the finest and most durable exterior painted finish available. As you might expect, the roof covering is rugged, sun and tear resistant, one-piece painted aluminum — not rubber.

(All Models)

The Lazy Daze frame, located between the inside and outside walls, is backed with a lifetime warranty to the original owner.

This unique warranty substantiates our awareness that we manufacture a rugged product, with built-in longevity for many years of trouble-free enjoyment.

CREATURE COMFORTS

We offer many floor plans, that include different lower bed locations and size choices. Tell us what your sleeping needs are, and we feel confident we can accommodate you. For example: We have designed two floor plans with permanent island beds. The sofas on three other floor plans can readily transform into king size beds and four other plans offer twin beds. Remember, there is also a queen size bed in the driver/passenger cabover area, with the exception of the 22' and 30' models.

Lazy Daze installs the largest windows possible, to create that spacious, wide open feeling. The coach windows, by the way, on all Lazy Daze are double pane laminated insulating glass. We are confident you will not find another make with the large window sizes as well as the many choices of floor plans.

All of our seating areas are constructed with comfort in mind. We have designed special high quality, seven inch multi-density foam cushions for all of our sofas.

Both front captains' chairs include adjustable lumbar support, to give you comfort you might never have believed possible when driving or riding as a passenger in a Lazy Daze motorhome. Plenty of inside and outside storage is always very important. We include many interior drawers and cabinets to accommodate all of those items that you need to take with you. We have also designed the Lazy Daze to provide you with outstanding exterior storage for such items as: fishing poles, folding chairs, golf clubs, etc. and with some models skis.

A large number of interior light fixtures are strategically spaced, to furnish excellent light where it is needed. We take advantage of the most efficient type of lighting fixtures available; twelve volt fluorescents, which can be found throughout each coach. We install up to seven fluorescent lights and up to a total of 16 light fixtures, both incandescent and fluorescent, in our coaches.

26½' Rear Bath

CREATURE COMFORTS (continued)

Efficiently designed, spacious sized bathrooms with "dry showers" (the toilet is not within the shower) allow adequate room for even the larger occupants. Dressing mirrors, medicine cabinets and ceiling exhaust fans are also included with all Lazy Daze floor plans.

A roof mounted directional TV antenna with a pre-amplifier and cable-direct capability, an AM/FM

stereo cassette radio with multiple speakers, a forty channel C.B. (except the 22') are just some of the many standard features.

To help prevent the entrance of unwanted cold or heat to the interior of the motorhome, and to provide all weather comfort, our motorhome includes extra insulation. All Lazy Daze walls, floors and ceilings contain 2½ inches of high density fiberglass. This is

up to twice the insulation of many other motorhomes. Both the inside and outside of the coach walls and ceiling are plywood lined. This double wall construction further enhances our insulation and structural integrity. Even the water lines that normally are installed underneath the coach in other brands, travel within insulated causeways in the floor. Yes, Lazy Daze is an "ALL WEATHER COACH"

ROAD MANNERS

Take just one test drive in a Lazy Daze and the subject of "Road Manners" will be answered once and for all. You will then become even more aware of the importance of our quality of design and workmanship.

Lazy Daze will gladly show you that it is not necessary for a motorhome to quiver, creak, rattle and groan when you travel down the highways; nor should the motorhome lurch over tar marks and road bumps. When high crosswinds prevail, you should not have to hold on to the steering wheel for "dear life." Weight distribution and limitations are strictly adhered to during the design of our motorhome. Our low silhouette, in combination with proper weight distribution, which is down and forward, eliminates the need for special springs or suspension airbags - - which are no more than a "Band-Aid" for poor design engineering. We are sure you will have difficulty finding another motorhome that doesn't suffer from one or more of the above annoying problems. Our final product is a motorhome with "Super Road Manners".

23½' Twin/King

MILEAGE

We at Lazy Daze spent many years creating floor plans that offer the features and comforts of the "big ones", and still maintaining the many advantages of a compact motorhome. Less overall length allows easier parking, and quite often eliminates the necessity of towing a car. A shorter motorhome is easier both physically and mentally to drive. It can maneuver within tight places that the "big ones" can't.

When a motorhome weighs less, the vehicle has a better power weight ratio, and consequently better gas mileage. Many of the "big" motorhomes are only reporting from 4 to 6 m.p.g. Our design theory is: "Build the motorhome with as low a silhouette as possible, with an aerodynamic profile, and as light as possible without sacrificing strength and quality"

Motorhome Being Custom Painted

MILEAGE (continued)

Couple the Lazy Daze coach with the latest Ford or Chevrolet chassis technology, i.e., electronic fuel injection, computer monitored engines, steel-belted radial tires, an overdrive automatic transmission and you will have a motorhome that is capable of traveling over twice as far on a gallon of gasoline.

AND, "ICING ON THE CAKE"

Lazy Daze has always offered a repair service at our factory location, for Lazy Daze owners only. For our customers that reside too far away; they can contact their local independent RV repair shop. Over the years, this has been the best choice for repairs on R.V.'s of any make. Their business survival is dependent upon being able to do quality repairs on all R.V. makes and models.

We offer a national warranty program for our motorhome - - which includes one year parts and no mileage limitation. With clearance from our office, we reimburse our customers that live a reasonable distance from our plant, for any warranty work completed by another R.V. repair company. Typically, the chassis and major appliances carry their own national warranty.

Is a detailed owners' manual furnished with other brand new motorhomes? Are other brand new motorhomes thoroughly checked out with the customer at delivery time? We provide a 65 page owners' manual at the time you order your new Lazy Daze. It is full of valuable information about the motorhome. At delivery, a Lazy Daze factory trained technician spends up to one half day demonstrating and checking out the motorhome in your presence. When you leave our factory with your brand new motorhome, you will certainly have complete knowledge as to the operation of your new Lazy Daze.

Why settle for second best when you can own a Lazy Daze, for your new vacation home on wheels. Travel the highways of America within the luxurious comfort of the best Class "C" motorhome available. The one and only Lazy Daze.
